Northstar RAG Dummy Dataset

Quick-start guide for Confluence Cloud and local RAG testing

What is included

Folder	Contents
01_Confluence_Pages	10 Word documents for bulk import as Confluence pages
02_Attachments	2 PDFs, 1 Word file, 1 Excel workbook, video, transcript, and SQLite database
03_Evaluation	30 questions, expected answers, sources, and routes
04_Developer_Data	Page metadata, raw JSON, timing manifest, and data dictionary

Fastest Confluence setup

1. Open a private Confluence Cloud test space and create a blank page.

2. Before typing, open More actions, choose Templates and import, then open the Import tab.

3. Choose Word document and select all 10 DOCX files in 01_Confluence_Pages.

4. Review the restricted Imported pages group created by Confluence, then publish and organize the pages.

5. Create a Dataset Attachments page and drag the files from 02_Attachments onto it.

6. Keep support_operations.db local for SQL testing. It is not a live Confluence source.

7. Run the questions in 03_Evaluation and verify the expected citations.

Important

All information in this bundle is fictional. Do not combine it with real company information while testing an unapproved external AI service.
